DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 23, 2004 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-29 have been considered but are most in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 5-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Specifically, claim 5 recites the limitation "the packet data services network" (line 3).

There is insufficient antecedent basis for this limitation in the claim. Applicant may overcome

Art Unit: 2665

this rejection by amending the claim to change "the packet data services network" to "a packet data services network".

Claims 6-8 are rejected for being dependent upon a rejected base claim. Applicant may overcome this rejection by amending claim 5 as suggested above.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1, 2, 5, 6, 9, 11-15, 17-21 and 23-26 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,577,168 to Haas et al.

Regarding claims 1, 5, 9, 11, 15, 17, 21 and 23, Haas teaches a method for transmitting from a second infrastructure element (e.g., one of cells 6 in FIG. 1) associated with a packet data services node (e.g., base station 10, see col. 2, line 1 – col. 4, line 67 regarding data traffic in a packet switched system) a message (e.g., list of active mobiles associated with the cell, or second infrastructure element, see col. 3, lines 50-64) including a number of network connections (e.g., connections of the active mobiles in the second infrastructure element) associated with a mobile station (e.g., mobile 14) and a reduced list of identifiers (e.g., ID numbers) and enhanced information (e.g., addresses of destinations and channel numbers, see col. 3, lines 58-64) associated with the connections, wherein the active connections within the second infrastructure element (i.e., the cell from which the message is transmitted) are viewed as non-active or

Art Unit: 2665

dormant connections by the first infrastructure element (i.e., the cell which receives the message) (e.g., see col. 3, line 50 – col. 4, line 18), and wherein the dormant connections are connections that are not being used to transmit traffic channel data (e.g., the dormant connections established inherently do not transmit traffic channel data since such data is transmitted on the active connections, see col. 4, lines 5-18).

Regarding claims 2, 12, 18 and 24, the message of Haas does not comprise Service Request Identifiers (e.g., see col. 3, lines 50-64).

Regarding claims 6, 14, 20 and 26, the message of Haas includes packet zone identification information (e.g., lists are specific to coverage area, see col. 3, lines 50-64).

Regarding claims 13, 19 and 25, Haas teaches the message comprises an origination message including an indicator that the dormant network connections are dormant (e.g., the message includes channel numbers associated with the connections, wherein the assigning of channel numbers is indicative of the status of the connection as either active or dormant, see col. 3, line 50 – col. 4, line 18).

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 3, 4, 7, 8, 10, 16, 22 and 27-29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haas et al. in view of U.S. Patent No. 6,496,491 to Chuah et al.

Art Unit: 2665

Regarding claims 3, 10, 16, 22, 27 and 29, Haas teaches the method as discussed above regarding claim 1, and further, Haas teaches a connection table (e.g., database list, see col. 3, lines 50-64) that includes identifiers (e.g., ID numbers) and further discloses that the method may be applied to communications which include mobile computing, wireless messaging, file transfer and database access (e.g., see col. 1, lines 15-23) and, also, that the identifiers may comprise IP addresses (e.g., see col. 3, lines 13-16) wherein such an IP connection for file transfer and database access implicitly comprises connection to a network access server. However, Haas may not specifically disclose the connections are PPP connections, wherein the connection table would be a reduced entry PPP connection table.

Chuah also teaches a method for packet data communications experiencing handoffs, and further, teaches a specific method for allowing the transfer of files and database access connections wherein a PPP connection is transferred from one packet server to another packet server (e.g., see abstract) without having to terminate a current PPP connection and then reestablish a new PPP connection (e.g., see col. 2, lines 1-9). Chuah also teaches a connection table is provided for the PPP connections (e.g., see col. 14, lines 35-41). The teachings of Chuah provide a mobile communications user with the ability to change connections from one network access server to another without having to terminate and then re-establish connections (e.g., see col. 1, line 55 – col. 2, line 37). As discussed, Haas also discloses mobile communications may include file transfer and database access (e.g., see col. 1, lines 15-23), however, Haas may not specifically disclose an embodiment for achieving the transferring of a PPP connection from one packet server to another packet server without having to terminate a current PPP connection and then re-establish a new PPP connection. Thus, at the time of the invention it would have been

Art Unit: 2665

obvious to one of ordinary skill in the art to apply the teachings of Chuah to the method of Haas, whereby the dormant/non-active connection table of Haas comprises connections which are PPP connections, in order to provide a specific method for allowing the transfer of files and database access connections wherein a PPP connection is transferred from one packet server to another packet server without having to terminate and then re-establish connections (e.g., see col. 1, line 55 – col. 2, line 37).

Further, regarding claim 3, the identifiers in a reduced PPP connection table taught by Haas in view of Chuah implicitly includes radio access network packet data service node interface communication pipe identifiers (e.g., see Haas col. 1, lines 30-40 regarding a radio access, or cellular, network; and see Chuah FIG. 8 regarding packet data service node 815 and col. 14, lines 35-41 and Table 4 regarding identifiers implicitly comprising communication pipe identifiers).

Regarding claims 4 and 28, the message of Haas does not comprise Service Request Identifiers (e.g., see col. 3, lines 50-64).

Regarding claims 7 and 8, the enhanced information (e.g., addresses of destinations and channel numbers) of Haas in view of Chuah implicitly conserves traffic channel resources by reducing negotiation or registration (e.g., see Haas col. 3, lines 58-64 regarding transmitting the identified addresses of destinations and channel numbers already associated with the active connections, wherein such transmission implicitly reduces connection negotiation or registration by informing the receiving unit of such existing connection information). Further, regarding claim 7, Chuah teaches the connections comprise PPP connections (e.g., see col. 1, lines 63-68), and as discussed above, at the time of the invention it would have been obvious to one of

Art Unit: 2665

ordinary skill in the art to apply the teachings of Chuah to the method of Haas, whereby the dormant/non-active connection table of Haas comprises connections which are PPP connections, in order to provide a specific method for allowing the transfer of files and database access connections wherein a PPP connection is transferred from one packet server to another packet server without having to terminate and then re-establish connections (e.g., see col. 1, line 55 – col. 2, line 37). Further, regarding claim 8, Haas teaches the mobile units may utilize IP (e.g., see col. 3, lines 16-23), thus, implying Mobile IP is utilized.

Conclusion

- 9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 5,774,805 to Zicker discloses transmitted a dormant channel list.
- 10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Justin M Philpott whose telephone number is 703.305.7357. The examiner can normally be reached on M-F, 9:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Huy D Vu can be reached on 703.308.6602. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
